WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** VERY, VERY HOT Tues/Wed, near to record breaking heat ***

*** High Risk of Significant Fire Potential when thunderstorm activity increases later this week ***

High pressure over the region will become stronger today and hold the region in its furnace grip for several days yet. The peak of the heat will be in place Tuesday and Wednesday with the hottest inland areas 110 to 115 or even a bit hotter in a few places. Thunderstorm activity will be very limited through Tuesday, but can't be ruled out entirely along the Cascade/Sierra crest from about Mt. Lassen south and eastward. Firefighter health is a serious issue in this heatwave as it will be more about staying cool along with good hydration. Later Wednesday into Thursday the high with shift position a bit to bring a SE flow with monsoon moisture in it across the region. Isolated thunderstorms will return to the region possibly as early as Wednesday and could form over the Coast Range north of Pt Arena then. Thunderstorm activity will increase Thursday and Friday, although it remains quite uncertain where the best chances for them will be then. It does seem likely they will form in locations much further west than recently, however, and possibly even close to the coast. We may also see active nocturnal thunderstorm activity as well. High Risk for Significant Fire Potential is in place for the mountain areas Thursday and Friday, but there is also some chance that the Sacramento Valley and Bay Area may need to be included. High Risk conditions may continue for some areas into the weekend as well. These conditions will favor new starts, possibly create holdovers and support active burning or even rapid fire spread.

The coastal marine layer in the north remains a bit thinner than usual under a light offshore wind overnight, but daily afternoon sea breezes will continue as will areas of overnight low clouds near the coast.

SOUTHERN CALIFORNIA

Hot through Friday

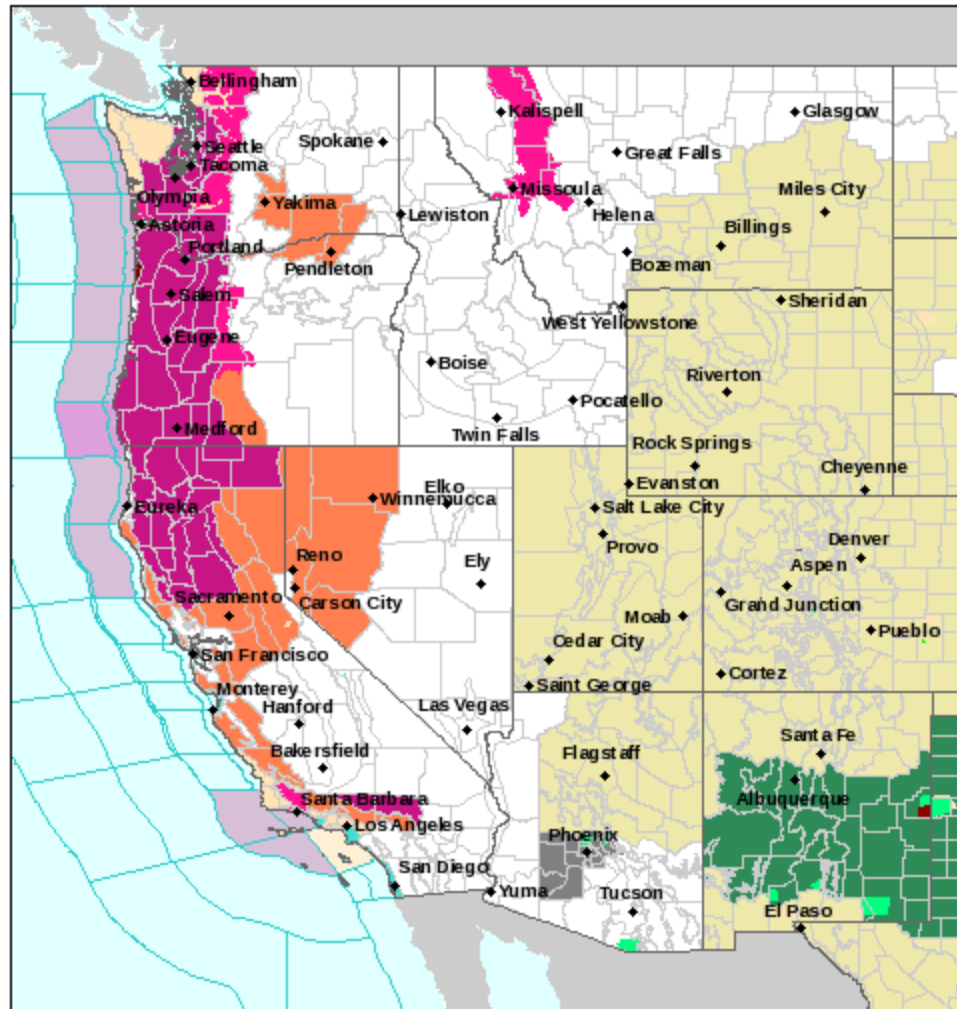

Gusty north winds across Santa Barbara tonight

Scattered thunderstorms Tuesday afternoon through Friday afternoon

East to southeast flow aloft around high pressure centered over Northern Nevada will continue to bring isolated afternoon showers and thunderstorms to the Sierra and to the mountains and deserts of the region east of I-15 today. The easterly flow will continue causing moisture to increase bringing scattered showers and thunderstorms to the mountains and deserts Tuesday afternoon through Friday afternoon. Some of the shower and thunderstorm activity will also affect the coastal and valley locations starting across Southern California Tuesday afternoon and across Central California Wednesday afternoon. The strong high pressure over Nevada will also cause temperatures to be 5 to 10 degrees above normal through Friday, with mid 80s to mid 90s across the mountains and mid 90s to 108 in the valleys. Minimum humidity will remain mainly between 12% and 25% away from the coastal areas today. Minimum humidity will increase to above 20% across Southern California starting Tuesday and across Central California starting Wednesday. North winds of 10 to 20 mph with gusts to 35 mph will surface across much of Santa Barbara County and the Grapevine tonight. Otherwise winds will be normal through Friday, except there will be strong and erratic winds in and near any thunderstorms. The high pressure will weaken causing temperatures to cool back to near normal this weekend. The shower and thunderstorm activity will decrease this weekend, with only isolated afternoon showers and thunderstorms over the Sierra and over the mountains and deserts of Southern California east of I-15.
